DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-32, drawn to a method for use in the diagnosis of endometriosis and in the monitoring of the progress of endometriosis.

Group II, claim(s) 33-35, drawn to kit comprising a compound that binds a prothymosin gene.

Group III, claim(s) 36-41, drawn to a method for use in the diagnosis of endometriosis in a subject comprising detecting prothymosin gene product in vivo.

Group IV, claim(s) 42-43, drawn to a method for the treatment of endometriosis comprising administering to the subject a probe comprising a detectable label.

Group V, claim(s) 44-45, drawn to a screening method for determining whether a compound modulates the expression of a prothymosin gene product in an endometrial cell.

Group VI, claim(s) 46-56, drawn to a method for treatment of endometriosis in a subject comprising the step of administering to the subject a compound that decreases prothymosin activity.

2. The inventions listed as Groups I-VI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the claims recite a prothymosin gene product, which is known in the art, (as claimed in the kit claims, claims 33-35). Baxevas et al teaches prothymosin gene product. (Journal of Immunology, Vol. 148, No. 7, April 1992). The claims are also directed to endometriosis being detected and treated by use of the prothymosin gene. It would have been prima facie obvious that endometriosis

may be detected and treated by prothymosin because it was known in the art that endometriosis was linked with immunogenic tissue. (See Ota et al, Fertility and Sterility, Vol. 60 No. 5, 1993.)

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
